ABSTRACT

This Kids Count report examines statewide trends in the well-being of North Carolina's children. The statistical portrait is based on 22 selected key indicators representing background demographics, economic, educational, health, and social well-being: (1) children poverty rate; (2) TANF recipients; (3) children in families receiving food stamps; (4) children enrolled in free/reduced price school meals; (5) children in publicly subsidized child care; (6) Medicaid child enrollment; (7) infant mortality; (8) low birthweight; (9) births to teens; (10) births to mothers with inadequate prenatal care; (11) child deaths; (12) child care enrollment; (13) third grade math and reading proficiency; (14) eighth grade reading and math proficiency; (15) SAT scores and percent of graduating seniors taking test; (16) public high school completion rate; (17) public high school dropout rate; (18) public high school per pupil expenditures; (19) reported child abuse and neglect; (20) substantiated child abuse and neglect; (21) foster care; and (22) youth in the juvenile justice system. Part 1 of the report explains the new indicators and charts in the report and provides an overview of the statewide findings. Appended to Part 1 is information on data sources and a discussion of the Leandro decision, a landmark court case concerning public education in North Carolina. Part 2, the bulk of the report, offers specific findings and trends over the past 10 years for all 100 counties and statewide information related to the Leandro decision. Part 3 of the report presents additional data notes and sources. (KB)

About the Photographs

These images were made by the following Durham Public School students: Eliza Bagg from C.C. Spaulding Elementary (front cover), Philip Dean from Club Boulevard Elementary (page 11), a group photograph from Club Boulevard Elementary (page 12), an individual submission from Shepard Middle School (page 13), and Alicia Harrison from Fayetteville Street Elementary School (back cover). These students participated in Literacy Through Photography (LTP), a program of the Center for Documentary Studies. For over a decade, under the leadership of artist Wendy Ewald, LTP has provided more than a thousand Durham elementary and middle-school children with tools for self-expression. The students photograph scenes from their lives and then learn to develop and print their film in the darkroom. These images become the catalyst for subsequent written investigations of self, community, family, and dreams.

The Center for Documentary Studies, an interdisciplinary educational organization affiliated with Duke University, is dedicated to advancing documentary work that combines experience and creativity with education and community life. Founded in 1989, CDS connects the arts and humanities to fieldwork, drawing upon photography, filmmaking, oral history, folklore, and writing as catalysts for education and change. CDS supports the active examination of contemporary society, the recognition of collaboration as central to documentary work, and the presentation of experiences that heighten our historical and cultural awareness. CDS achieves this work through academic courses, research, oral history and other fieldwork, gallery and traveling exhibitions, annual awards, book publishing, radio, community-based projects, and public events.

For more information, please contact 919-660-3663 or visit the Center's website: <http://cds.aas.duke.edu>.

Welcome to the NC Children's Index 2002

Dear Friends of NC's Children:

Since 1983, the NC Child Advocacy Institute (NCCAI) has been our state's leading resource for the latest, most comprehensive and accurate statistics about young North Carolinians (0-17). We have learned over the years that what people don't know can hurt children. We also have learned that well-informed decisions help children.

On the eve of our 20th anniversary, we celebrate the improvements in getting you the data you need to improve the well-being of NC's children and youth. We used to monitor less than two dozen indicators. Today, we track more than two hundred! In the 1980's, updating "the numbers" was an annual event delivered through our publication of the *NC Children's Index*. Now, providing you with the best available data is a continuous process — the fruits of which you can harvest anytime at our website: www.ncchild.org.

Because of this on-line resource, we have streamlined the *Index* itself. The document you're holding is a handy resource to carry with you — and a brief guide to the different ways in which you can find, understand, and use the information NCCAI has compiled for you.

This year's *NC Children's Index* combines critical information about our children and youth from many sources into one publication. This data book identifies indicators of the well-being of our young people in a range of areas: Health, Education, Social, and Economic. County-level data provide a detailed portrait of how our younger generation is faring in order to better understand their strengths, and their needs. These data about your county also are available free of charge at www.ncchild.org.

The *NC Children's Index 2002* reminds all North Carolinians that our state's youngest citizens deserve and need special attention. For too many of our children, the future will not be bright — unless we adults work hard to change the direction of our state's public policy. Even in tough economic times — perhaps especially when resources are scarce — we must be vigilant in ensuring that the burden of budget cuts will not be borne by vulnerable children and youth. Shortchanging children is a perfect example of being "penny wise and pound foolish." May the data on child well-being be an inspiration to help us work together to make North Carolina a better place to be a child and to raise a child!

Background Information on the NC Children's Index 2002

The North Carolina Child Advocacy Institute offers you this sampler of the best available data about children and youth (0-17) across our state. The *NC Children's Index 2002* contains selected indicators that profile the well-being of young North Carolinians. Indicators are quantifiable measures of child, family, and community functioning that provide a snapshot of children's lives. The indicators selected for the *Index 2002* represent five key domains: Background Demographics, Economic, Education, Health and Social.

A wide range of indicators on child well-being expands the knowledge base for public policy planning, decision-making and advocacy. This broad view of some key factors and forces shaping children's lives can help us see them whole. Of course, these data do not fit or reflect the unique reality of each individual child. In addition, the data in this document only cover one time period. We encourage you also to consider how these indicators have changed over time, so you will develop get a more complete picture of NC child well-being. Trend data for all of these indicators (plus many more) are available at our website: www.ncchild.org.

The NC Child Advocacy Institute creates the *NC Children's Index 2002* as part of our mission to improve the quality of life for all children and youth in the state. We offer this information for public policy makers, community leaders, child-related professionals, professors and students, parents, and other concerned individuals/organizations. In the past, these data have been used for everything from grant proposals to preparing new legislation. The *NC Children's Index 2002* highlights where public policy and citizen attention are needed.

The *NC Children's Index 2002* data on child well-being are offered with the understanding that life is more complex than statistics. Although numbers do not fully represent any particular child or family, data can be used to inspire and create change. Despite the difficult problems reflected by some of these facts, we must never lose sight of the truth that much *can* be done to improve the life of a child. These data are offered as a means to encourage positive action on behalf of North Carolina's children and youth.

QUICK GUIDE to the *NC Children's Index 2002*

- Background information about the data presented here — **pages 2-3**
- State-level statistics on children and families, including leading indicators of well-being — **page 4**
- County-level charts comparing all 100 NC counties on these key indicators — **pages 5-8**
- Overview of the data and data tools (to make your own customized charts, graphs and tables) available free of charge on-line at www.ncchild.org — **pages 9-10**
- Appendix 1: Data Notes and Sources—Definitions and references for the information in the *NC Children's Index 2002* — **pages 11-12**
- Appendix 2: What Everyone in North Carolina Should Know About the Leandro Decision — **pages 12-13**
- Acknowledgements and a description of the NC Child Advocacy Institute — **page 13**

What new indicators appear in this edition of the *Index*?

The *NC Children's Index 2002* continues NCCAI's tradition of providing the best available data on child well-being. The new indicators are:

- *Public school completion rate* [the number of youth who enter ninth grade and the number who graduate four years later];
- *Youth in the juvenile justice system* [not only youth in detention centers, and in youth development centers (training schools), but also youth in Juvenile Crime and Prevention Council programs]; and,
- *Family economic indicators* [such as unemployment rates.]

New Education Indicator

In addition to such familiar education indicators as public school test results and per pupil expenditures, this year we have included the high school completion rate. This statewide average reveals that during 2000-01, only 57% of our youth graduate from high school in four years. Stated another way, a stunning 43% of the youth who enter NC high schools do not graduate four years later! Along with the dropout rate, this underlines the major challenges our state faces in ensuring that all our youth actually receive the education they need to succeed as adults. Such a dramatic percentage of young people not finishing high school on time (or at all) signals problems far deeper than those that can be dismissed on the grounds that "some youth just don't fit in at school."

Many people inside and outside the education system are working hard and well to improve the schools. One major new push for meaningful change is coming from North Carolina's court system. In its landmark 1997 Leandro decision, the NC Supreme Court ruled that ALL children in North Carolina have a constitutional right to an equal opportunity to receive a "sound basic education." On remand from the NC Supreme Court, Superior Court Judge Manning has presided over a lengthy trial to determine how to implement the Leandro decision in practice. Among his key rulings, Judge Manning found that:

- (1) All children in NC are not receiving a sound basic education.
- (2) The State of North Carolina has the ultimate responsibility to ensure that every child has an equal opportunity to obtain a sound basic education.
- (3) If necessary, the State must provide additional resources to help children at risk of academic failure.

However, the State has filed an appeal to overturn Judge Manning's rulings. Thus far, the State has not done what is necessary to implement the Leandro decision across North Carolina.

For more background information, please see Appendix 2: *What Everyone in North Carolina Should Know About the Leandro Decision*. For the latest information on the progress of this battle over the nature and direction of education reform in North Carolina, please visit www.ncchild.org.

Another education indicator in this year's *Index* illustrates the depth of the school achievement problem statewide. In 2000-01, almost one-third of our state's third graders did not perform at grade level on the End of Grade reading and math tests. While improvements in test scores have been made in recent years, there remain wide disparities in scores between those of white students and those of African Americans and Hispanics. When combined with the numbers of our youth who do not complete high school, these two facts from the *NC Children's Index 2002* data demonstrate that our state has a very long way to go to provide a sound basic education to all young North Carolinians.

What Are the Odds?

Did you know that in North Carolina:

1 out of 3 	Youth are not completing high school in four years
1 out of 3 	Third graders are not performing at grade level on End of Grade math and reading tests
1 out of 3 	Children are eligible for subsidized school meals
1 out of 3 	Children are enrolled in Medicaid
1 out of 4 	North Carolinians are below the age of 18
1 out of 4 	Children are African American
1 out of 4 	Children live in a single parent families
1 out of 9 	Children are not living with either of their biological parents
1 out of 13 	Children are Latino/Hispanic

From Data on Children tables on pages 5-8.

New Juvenile Justice Indicator

In our previous edition of the *NC Children's Index 2000*, we offered the juvenile custody rates at the state and county levels. In this 2002 edition, we cite the rates of youth in the total juvenile justice system, which includes not only youth in the detention centers and in youth development centers (training schools) but also youth in Juvenile Crime and Prevention Council programs. Although the NC General Assembly enacted a sweeping new juvenile justice reform law in recent years — and created a new Cabinet-level NC Department of Juvenile Justice and Delinquency Prevention — North Carolina still has over 30,000 youth needing juvenile justice services each year.

These youth often have not received needed services in our public schools and mental health systems. Worse, recent budget cuts to these programs — especially in the area of community-based prevention, early intervention and treatment — will mean even less help for youth who are troubled and in trouble. More resources better spent are sorely needed to turn around the lives of these youth before their potential contributions are squandered. Otherwise, we all will pay the costs of their transformation into adult criminals.

New Economic Indicators

For the first time, the *Index* offers family-related economic data at the state and county levels in order to help readers view another crucial part of the every child's environment. We include unemployment rate, per capita income, median income, and the NC Self Sufficiency Standard.

In the last two years, a general economic downturn has occurred in North Carolina due to multiple factors, including: the overall decrease in the state's manufacturing jobs, the decline in growth of high technology firms, the economic impact of the September 11th terrorist attacks, and plunging financial markets.

These negative realities have caused widespread family economic stress in our state. This, in turn, has made any existing difficulties even worse for children growing up in families struggling to make modest ends meet. From working extra jobs and having little time for parenting, to increasing numbers of homeless families, hard economic times translate directly into harder lives for far too many of our state's children.

A stagnant or declining tax base has decreased state revenues significantly. As result of these and other economic pressures, the state and counties' abilities to provide services for families and children has been challenged. Massive program cuts have already been enacted, and more are coming. The state budget deficit is estimated to be more than \$1 billion dollars. State-funded children and family service providers have had to work even harder as coworkers are laid off. Legislators and the Administration have struggled over how to meet the state balanced budget mandate.

Despite this bad news, a few programs have survived intact. For example, the NC Health Choice program — for children in families with modest income working parents — has been spared the budget ax thus far. The *NC Children's Index 2002* features data on NC Health Choice to underline its importance. The continued rise in enrollment reinforces the fact that this program is urgently needed to meet the health needs of NC's children.

NC Health Choice Enrollment

Exploring the NC State-Level Data Pages

The new indicators described above — along with many others that have been presented in previous editions of the *NC Children's Index* — appear in the two-page state data pages appearing here. These pages about North Carolina mirror the county-by-county data pages you will find at NCCAI's website (www.ncchild.org). Each of our state's 100 counties has a two-page, on-line data profile just like the state pages in this document.

At the state and county levels, these data cover two time periods in order to illustrate the percentage change for each indicator. This kind of trend data makes it easy to understand the areas in which progress has been made, as well as well those areas in which the trend heads in the wrong direction. The **demographic page** offers trends for population, diversity, household composition, and family economic data. The pie chart shows "Why North Carolina needs to support the Leandro decision."

The **Indicator page** offers data in the major domains of child well-being: economic, educational, health and social/safety. Together, these two pages offer a portrait of the health and well-being of children over time. They also allow you to make useful comparisons:

- The state or county can be **compared to itself** over time.
- Individual indicators can be **compared to progress on other indicators**.
- County data can be **compared to state data**.

see page 4

Using the Charts Comparing NC's 100 Counties

This hard copy edition of the *NC Children's Index 2002* offers new charts showing the most recent data about key indicators of child well-being in all of NC's 100 counties. You can view how well one county is doing on a specific indicator in comparison with the state average, and with other NC counties. In this document, NCCAI provides rates for each indicator, rather than the raw numbers. This allows everyone to make basic comparisons across counties despite the huge differences in population size. For example, when comparing dropouts between Union County and Mecklenburg County is more meaningful to use rates than comparing the actual number of dropouts in each place.

Of course, there are times when having the actual county-by-county numbers are very important. There also are situations in which the most useful comparisons are about trends over time rather than relying solely on current statistics. That is why we recommend that you also view the raw numbers and the trends data at NCCAI's website www.ncchild.org.

For further data and information on the issues, go to www.ncchild.org

See Discussion of the Issues and Data Notes and Sources for more detail.

¹Unless otherwise noted, "child" or "children" refers to people ages 0-17. ²All indicator rates are per 1,000 children, unless followed by a % sign or otherwise noted.

n/a means data was not available.

Special Note: When numbers are under 20, rates may be less meaningful and should be used with caution.

See Appendix 1: Data Notes and Sources for definitions and sources of data.

¹Indicator rates are per 1,000 children/youth. ²Ages 10-17.

*Special Note: When number of children was less than 6, rates were not calculated.

Beyond the Index Data:
Customizing Your Own Charts,
Tables, Graphs and Maps at
www.ncchild.org

In addition to the print and on-line versions of the *NC Children's Index 2002*, NCCAI also provides you with an interactive database free of charge. All the data available in the *Index* and over **200 more indicators** at the state and county levels are available at our website any time. Our interactive database allows you to search and manipulate data with a few clicks of your mouse. Driven by SAS software, NCCAI's system allows users of all skill levels to create tables, make graphs, generate maps, and download data. You specify the indicators, the counties, and the time periods you want from an easy-to-use, on-line menu. You also can create and print county ranking for the indicators of your choice. Advanced users can do statistical analyses and scatter plot correlations of the data.

Access to the NCCAI database is FREE. However, you will need to log-in either as a guest or a registered user. Registered users enjoy several benefits. Your indicator selections are saved from one visit to the next. You can download data into your own Excel spreadsheet.

Once logged in, the expandable menu on the left side of the web page provides you with a number of options for using the database. The following are samples of reports that can be generated by using NCCAT's interactive state and county data system.

Create a County Profile

This report provides a quick overview of the NC county of interest to you. With one click, you can create a report that shows the pre-programmed key indicators of child well-being for that county. If you need more information, then you can produce a report including some or all of the indicators available in NCCAI's extensive database.

The output here is a table that you can print. You also have the option of downloading the data report into your Excel spreadsheet.

[illegible]

BEST COPY AVAILABLE

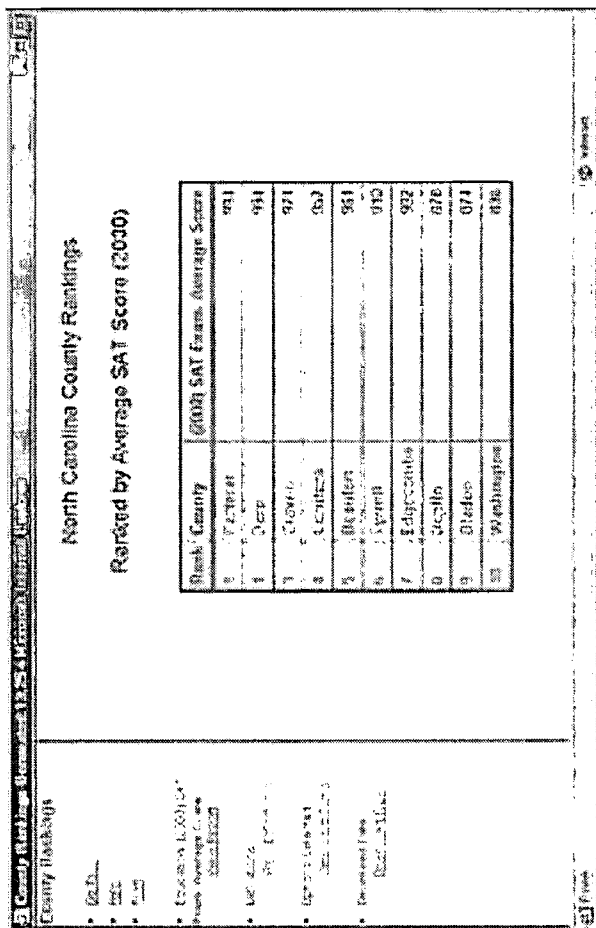

Reveal Statewide Rankings, by County

This is a good way to see how all (or a select group of) counties rank for a particular indicator. The county rank is displayed down the left side of the table, with the county name and value for the indicator shown to the right.

You can display other indicators on the table to provide additional information, but only one indicator is used as the basis for ranking.

If you want to see how the same counties rank by more than one indicator, you can generate multiple reports. You can customize your report by grouping counties on separate reports by classifications, such as region.

With one click from the left-hand menu, the table can be printed or downloaded into an Excel spreadsheet.

Develop a Bar Chart Comparing NC Counties

This chart provides a more visually-interesting way to look at rankings. For this report, you select counties first, then select a ranking indicator. A bar represents each county, with the length indicating its rank.

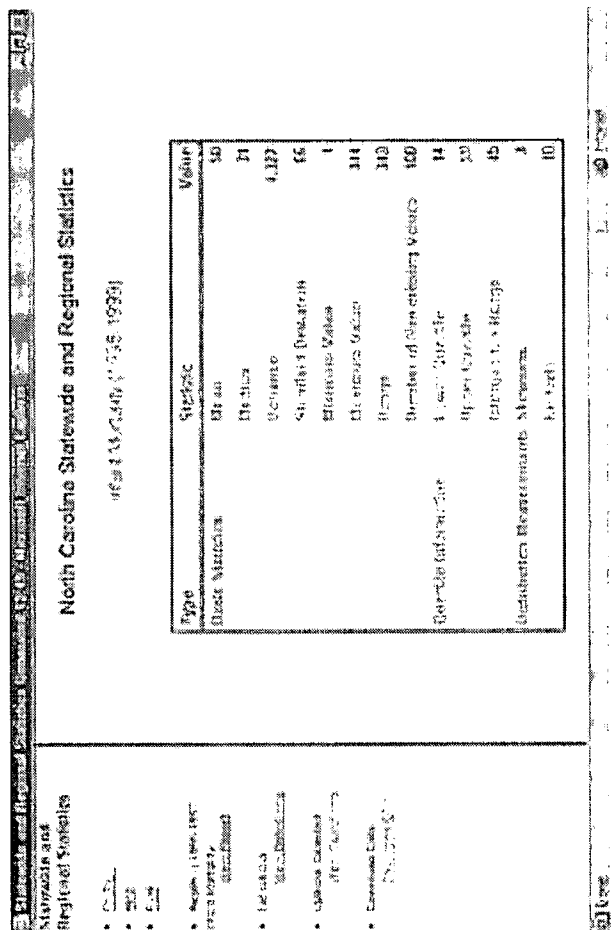

If you want to see how the same counties rank by more than one indicator, you can generate multiple charts. You can also customize your results by grouping counties on separate charts by classification, such as region.

BEST COPY AVAILABLE

Generate Detailed Statistics About an Indicator

This is a good way to view basic statistics for the state, region, or classification. The statistics include mean, median, mode, range, minimum and maximum values, quartiles, and distribution. This report makes the most sense if you select at least three counties. A separate report is generated for each indicator for all the selected counties.

Explore a Correlation Scatter Plot

This is a highly visual way to examine clustering or correlation. Each point on the plot represents a county. On the screen, you can move the cursor over a plot point to see the county information. You need to select numerous (or all) counties to see the pattern and its meaning.

This North Carolina Child Advocacy Institute publication is a sample of the data available at www.ncchild.org. By clicking on DATA, you can choose among several methods of locating and using data on child well-being. By clicking on the *NC Children's Index 2002*, you can see full PDF versions of these data for your county or for the state as a whole. The web version includes the raw numbers, as well as the rates, for two different time periods. It also includes a graph illustrating the trends. In addition, all the data in this publication — and over 200 other indicators — are available in our searchable and interactive database by clicking on the Interactive Database. Please register as a user. We also provide a link to the KIDS COUNT database of national indicators of child well-being.

*Caution: Most of the data in this publication on pages 5 through 8 are rates. Rates and percentages are presented for the current years only. Rates were not calculated when there were fewer than six events occurring in a county and are indicated by a *. Rates based on small numbers of events and small populations can often vary dramatically and caution should be used when the number of actual events is less than 20. Comparisons using these rates are risky. Such rates are not considered statistically reliable for projecting trends or considering impact. To see actual numbers, visit our website database: www.ncchild.org.*

Demographic Indicators: Population Estimates, Diversity, and Family Types

Population figures are drawn from the 100% count, April 1, 2000. Please note Hispanics are an ethnic group, and can be of any race category, and could include persons of any race. They are also included in the racial categories. Family types include two categories: those children living in households with their own parents, or those who are not living with their own parents such as with grandparents, or in foster homes, etc. Those children not living in households, such as those in group homes, or hospitals, are not included, but can be seen at our website: www.ncchild.org.
Source: *Census 2000, US. Census Bureau; Year: 2000.*

Children enrolled in Medicaid — includes the percent of children in the county/state, age 0 through 18, enrolled for Medicaid benefits at any time during the year. This is based on unduplicated numbers.

Source: *Division of Medical Assistance, NC Department of Health and Human Services; Year: Calendar Year: 2001.*

Unemployment figures are generated by the US Bureau of Labor Statistics.

Source: *NC Department of Commerce, Employment Security Commission of North Carolina; Year: Figures based on the first four months of 2002.*

Per Capita Income includes personal income for every person in a geographic area. Personal income includes wage and salary income, as well as fringe benefits, interest income, profits of businesses' dividends, cash transfers, such as Social Security and welfare payments.

Source: *US Bureau of Economic Analysis, regional accounts data local area — Personal Income Available at <http://www.bea.gov/beat/regional/reis/drill.cfm>; Year: 2000.*

Median Family Income is calculated by adding the total money income received in the calendar year by all family members. Family income differs from household income by excluding income received by household members not related to the household, persons living alone, and others in non-family households.

Source: *Federal Agency Data: Bureau of the Census — Census of Population and Housing; Year: 2000. Available at <http://linc.state.nc.us>.*

NC Self Sufficiency Standard — the Wider Opportunities for Women (WOW) calculations of the NC Self Sufficiency Standard, updated by the NC Justice Center and NC Equity. These figures are the family income needed to meet necessities. This was calculated for a family consisting of one adult, one preschooler, and one infant.

Source: *NC Justice and Community Development Center and NC Equity; Year: 1999 updating of 1996 figures.*

Families Earning Less than the NC Self Sufficiency Standard, or the Living Income Standard. The percent of families in the state/county who earn less than the amount needed to maintain a modest family budget. 1999 income tax records were used. Family expenses were estimated, including housing, food, child care, transportation, medical, tax costs, and Earned Income Tax

Economic Indicators – Children and General State/County

The percent of children living in poverty from the decennial US Census. The numbers presented here are from a different US Census source than the children in poverty numbers presented in the *NC Children's Index 2000* (which were from the Census Small Area Estimates Branch.) The two should not be compared.
Source: U.S. Census Bureau; Year: 2000.

Children receiving TANF (Work First) and Food Stamps is the percent of children in the county/state who receive these economic supports. This is based on the monthly average number of children, ages 0–17, who are the intended beneficiaries of these programs.

Source: Division of Social Services, NC Department of Health and Human Services; School Year: 2000–01.

Children enrolled in school meals is the percent of children in public schools who are eligible for free or reduced cost breakfasts and/or lunches at school through the government subsidized National School Lunch Program and National School Breakfast Program. Eligible children include those residing in households having a gross annual income below or a little above the federally-established poverty line. Students from all public school systems in the same county who receive subsidized meals have been combined in these data, but the numbers are weighted when calculating the percentages. The rate is the percentage of the Average Daily Membership of students in the school district that are enrolled in the school meals programs.

Source: NC Department of Public Instruction; School Years: 2000–01.

Children in publicly subsidized child care — The percent of children in the county/state who are in child care who are receiving public subsidies. This based on the average monthly number of eligible children ages 0–13, who receive federal/state subsidized child care through Work First, Smart Start, and other initiatives. Childcare is subsidized for families with incomes in the ranges of welfare, working poor or modest working class. The number of children receiving subsidies in a county may reach over 100% because: 1) Some children may receive more than one source of subsidy; 2) Some children who are receiving subsidies actually are enrolled in unregulated child care settings.

Source: Division of Child Development, NC Department of Health and Human Services; Year: SFY 2001.

Credits. The real needs of working families are more accurately reflected in the LIS, than in the Federal Poverty guidelines because the LIS accounts for increased amounts families now pay for transportation and child care.

Source: Schmidt SK, Gerlach D. Working Hard is not Enough. Raleigh NC: NC Justice and Community Development Center and NC Equity; Jan. 2001. Available at www.ncjustice.org/LivingWage/lwfullrpt.pdf; Year: 1999 update of 1997 tax filers.

Education Indicators

Note: All School data are aggregated by county

Child care enrollment is the percent of children of all children in the county who are in any childcare facility that is regulated by the Division of Child Development, NC Department of Health and Human Services. This includes regulated family childcare homes, licensed childcare centers, and religious based programs. To calculate the percentage of children in child care, the population of children, age 0–13, was used as the denominator.

Source: Division of Child Development, NC Department of Health and Human Services; Years: 2001.

Public School Testing — The percent of third graders and eighth graders proficient in reading and math i.e. those who scored at or above 2.5 (out of a score of 4) as determined by End of Grade standardized measures.

Source: Reports of Supplemental Disaggregated State, School System (LEA) and School Performance Data for 2000–2001, Subgroup Statistics by State, School System and School, Division of Accountability Services, North Carolina Department of Public Instruction; Year: 2000–01. Available at <http://www.ncpublicschools.org/vol2/rsds>.

Average SAT score for graduating seniors choosing to take the SAT (Scholastic Aptitude Test).

Source: Reporting Section, NC Department of Public Instruction; Year: 2001. Available at <http://www.ncpublicschools.org/Accountability/reporting/satmain.htm>.

Four year public high school completion rate is the percent of 9th graders who graduate four years later. This is not a true graduation rate as the public schools do not track individual students. Some students drop out, some transfer in and out of schools. However, as a cumulative number, this gives a better picture of the large percent of our youth who are not successful in completing our public schools than the annual drop out rate.

Center for Documentary Studies

Available at <http://www.ncpublicschools.org/fbs/stats>.

Public school annual drop-out rate for students in grades 9-12. Rates reported here are duplicated, i.e. students may be counted more than once.

Source: *NC Department of Public Instruction, Drop-Out Report*; Year: 2000-01. Available at <http://www.ncpublicschools.org/fbs/stats>.

Public school per pupil expenditure rate includes all sources of funding: state, federal and local and is calculated using the final average daily membership (ADM).

Source: *NC Department of Public Instruction: North Carolina Statistical Profile, 2000*; Year: 1999-2000.
Available at <http://www.ncpublicschools.org/stats>.

Health Indicators

Note: All birth statistics are based on place of residence of the mother.

Infant and child deaths — Infant mortality rate (per 1,000 live births) includes deaths of children born alive, but who did not survive to their first birthday. Death rate for children and youth, aged 1-17 (per 100,000 children), includes deaths from all causes: illness, injury, and violent deaths, which can include abuse, homicide, and suicide. These numbers and rates are reported for five-year periods in order to even out the effect of a small number of deaths in a small county.

Source: *State Center for Health Statistics, NC Department of Health and Human Services*; Years: 1996-2000.

Pregnancy and Birth — Babies born with low birth weight (under 2500 grams or 5 pounds, 8 ounces), births to mothers who were aged 15-19 per 1,000 females and births to mothers who had inadequate prenatal care. All of these factors are significant for having healthy babies. Low birth weight contributes to the infant mortality figures. There is considerable discrepancy between white and non-whites for these rates for all of these indicators. Note: the previous version of the *NC Children's Index 2000* included the mothers who had adequate prenatal care.

Source: *State Center for Health Statistics, NC Department of Health and Human Services*; Year: 2000.

Social Indicators

Child abuse and neglect — reports investigated and substantiated cases, *unduplicated* per 1,000 children. It is important to remember that neither the reports investigated number, nor the substantiated cases, reflects the true number of reports of child neglect or abuse which may have been received at the local DSS offices. Please note that in the previous edition of the *NC Children's Index 2000*, we have reported the *duplicated* number of children who were investigated or substantiated as abused. This latter number reflects children who may be reported more than once in a year, and the caseload of workers. However, in order to facilitate the discussion of the issues, we are reporting the *unduplicated* numbers this year.

Source: *Central Registry Reports of Child Abuse, Neglect and Dependency*; Division of Social Services, NC Department of Health and Human Resources; Year: NC State Fiscal Year (SFY): 2000-01.
Available at <http://www.dhhs.state.nc.us/dss/childrenservices/stats/programstatistics.htm>.

Children in foster care is the unduplicated number of children and youth as of June 30, 2001, for whom a county Department of Social Services (DSS) has legal custody and placement authority (as granted by the court system). This includes children who are in out-of-home placement, as well as those who may be in their own home, but in DSS custody. The rate is calculated per 1,000 children in the county population.

Source: *Children's Services, Division of Social Services, NC Department of Health and Human Services*; Year: 2000-01. Available at <http://www.dhhs.state.nc.us/dss/childrenservices/adoptions/index.htm>.

Total youths in juvenile justice system, rate per 1,000 youths, ages 10-17, in Training Schools and Detention Centers and in programs under Juvenile Crime Prevention Councils (JCPC's), which includes Court Intake, those under supervision of Court Counselors, as well as youth in JCPC programs such as SOS, One-on-One, Teen Court, Eckerd Camps, Boys & Girls Clubs. This rate is based on duplicated numbers and does not include youths who are in the Special Populations Program that seeks to prevent admissions to detention, or those in psychiatric facilities.

Center for Documentary Studies

What Everyone in North Carolina Should Know about the Leandro Decision

What is the Leandro decision?

It refers to a landmark court case about public education in North Carolina. Leandro is the family name of the one of the children from Hoke County on behalf of whom a lawsuit was filed in 1994. The original lawsuit against the State of North Carolina was brought by several low-wealth school districts, parents and students seeking more State funding for public schools. They argued that many students in their school districts required greater-than-average resources to get a "sound basic education," but that they didn't have sufficient local wealth to provide these resources. The heart of their argument was that no child in North Carolina should end up with an inadequate education because of the State's failure to provide sufficient resources. Several larger, wealthier school systems later joined this lawsuit against the State of North Carolina. They, too, wanted extra state resources to educate the high number of "at-risk" students in their school districts.

In 1997, the NC Supreme Court ruled that the State Constitution "guarantees every child of this state an opportunity to receive a sound basic education in our public schools." **This right can-not be taken away from any child by anyone for any reason.** It also ruled that the State of North Carolina has the ultimate responsibility to guarantee that right to all NC children. Further, the Justices established broad, common sense "outcomes" that define a sound basic education.

The Court concluded that if education results in young adults who are able to function as competent, informed, productive members of society — to be good citizens, to contribute to the economy, and to have mastered essential skills and knowledge — then they have received a sound basic education. If not, then children had been cheated out of their birthright as North Carolinians. Through this pioneering Leandro decision, the NC Supreme Court made it clear that a sound basic education for every child isn't just a worthy goal — it's the law!

Center for Documentary Studies

What happened after the NC Supreme Court wrote its decision?

The NC Supreme Court did not specifically address the complex issues in this case about resources or other key aspects of actually achieving the intended outcomes. The NC Supreme Court's role is to interpret the North Carolina Constitution, not to hold a trial about all the facts and issues surrounding any particular case. So, the Justices ordered an in-depth trial to figure out how make their Leandro decision real in the world. The NC Supreme Court appointed Wake County Superior Court Judge Howard Manning Jr. to preside over this trial and to issue rulings that would specify what the State of North Carolina — as the losing party in this lawsuit — must do. Judge Manning started this trial in 1999 and issued his final ruling in Spring, 2002.

During the trial, the State of North Carolina consistently and forcefully argued that it already is providing an equal opportunity for every NC child to obtain a sound basic education, and that it already is providing sufficient funding to local school systems. The heart of the State's case is that local education agencies are to blame if children are not meeting the Leandro standard, and that the burden of doing better is on these school systems, not on the State.

What did Judge Manning decide?

Based on the huge amount of evidence presented at the trial, Judge Manning decided that:

- Many North Carolina children are *not* receiving the sound basic education to which they are entitled. The right to a sound basic education extends to *all* children, but is especially crucial for children "at-risk" of academic failure in school. If necessary, the State must provide additional services and funds to help all NC children and youth meet the Leandro standard.
- The obligation to provide a sound basic education is the ultimate responsibility of the State of North Carolina. Judge Manning condemned all the finger pointing and blame-

shifting that exists between the State and local school districts. If local schools succeed on their own, that's great. If not, the State must step in to preserve each child's right. The State must do *whatever it takes* to guarantee that all children have an equal opportunity to obtain a sound basic education. The State cannot abdicate or delegate its ultimate responsibility here.

- It is not legitimate to take resources needed for the sound basic education of one group of children to provide the sound basic education for another group of children. All are equally entitled to benefit from this State constitutional right.
- Pre-kindergarten education for at-risk children is required. Lower class sizes are necessary. Effective leadership from principals and fully-qualified teachers in every classroom are mandated — as are first-rate professional development activities for existing educators.

Has the State of North Carolina taken the required next steps?

Not yet. The state decided to appeal Judge Manning's final ruling. However, during the appeals process, it agreed to start acting in accordance with this Court Order. Judge Manning found some of the State's initial responses unacceptable. Subsequently, Governor Easley issued an Executive Order mandating expenditures for a new pre-kindergarten initiative ("More at Four") and lower class sizes in the early years of elementary school. The Governor cited the Leandro decision and Judge Manning's Order as the legal justification for his Executive Order. The State Board of Education and the NC Department of Public Instruction have started to move toward implementation. The NC General Assembly made reference to the Leandro decision and Judge Manning's rulings numerous times during their budget and policy debates. But, thus far, the State's leaders have **not** been champions of this landmark case.

What does the NC Child Advocacy Institute recommend?

NCCAI urges that the Leandro decision and Judge Manning's rulings be embraced and enacted as fully and swiftly as possible. Reducing class size, ensuring that students have properly certi-

fied teachers (as well as first-rate principals), preparing four-year-olds to be ready for school and actively assisting struggling students (instead of just testing them) are among the key improvements ordered by Judge Manning. There is no acceptable rationale, even in difficult economic times, for denying NC's children their constitutional right to a sound basic education.

As child advocates, we also are keenly aware of the reality that what happens to a child outside the classroom has a direct impact on what a child is able to learn inside the classroom. School reforms are absolutely essential, but they cannot overcome all of the real-life problems children bring to school with them. North Carolina cannot become First in America in Education, as long as our state continues to rank in the bottom quarter of states in terms of child health, safety, and other measures of child well-being.

We must put "first things first" if we are going to be able to take advantage of the enormous possibilities offered to every child in NC by the groundbreaking Leandro decision. On the one hand, we must insist that every child's right to a sound basic education is honored by our local school systems. No exceptions. No excuses. On the other hand, we must stop pretending that children only bring the test-taking part of their brain to school. We must see them as whole children and do whatever is within our power to improve their lives and prospects.

What can you do to help our state improve schools for all of North Carolina's children?

From mentoring an individual child, to urging state leaders to use their power to truly benefit all young North Carolinians, we all have a moral obligation to help. Tell the Governor and the State Superintendent of Public Instruction that you want the State of North Carolina to implement the Leandro decision and Judge Manning's rulings wholeheartedly and without further delay. Ask your local principal, superintendent, and school board members what they have done — and what else they will be doing soon — to make the promise of Leandro a reality in your community. Together, let's make NC's children and youth the real winners of the Leandro case.

For the latest, most complete information about the Leandro decision and Judge Manning's rulings, please visit www.nccchild.org. You will find out more about what YOU can do to help.

NC Child Advocacy Institute

The North Carolina Child Advocacy Institute seeks to improve the well being of young North Carolinians. NCCAI influences the knowledge, attitudes, and actions of key public officials and other individuals/organizations who can impact and improve public policy.

Created in 1983, it has been North Carolina's premier state-level, non-profit, non-partisan, comprehensive child advocacy group for twenty years. It is the only NC organization to be granted membership in the National Association of Child Advocates.

The Institute chooses to celebrate and strengthen the good things that government already does, as well as to reveal shortcomings and suggest solutions to problems that are amenable to improvement through public policy and public sector action. We work directly with state government, the media, child-related professionals and organizations, families, and the general citizenry to help enhance public policies affecting NC's children and youth.

In carrying out our mission, NCCAI collaborates with local child advocacy groups as well as a variety of state-level organizations. NCCAI currently focuses on several priority areas: Education Reform, Juvenile Justice and Delinquency Prevention; Child Maltreatment and Child Fatalities; and, Child Health and Safety. We also react to proposed changes in public policies and appropriations across the full spectrum of areas affecting young North Carolinians.

NCCAI compiles and distributes timely and accurate information and data about children to a network of interested individuals in communities across the state. It is the North Carolina agency for the Annie E. Casey Foundation's national KIDS COUNT program. By providing reliable, useful information, NCCAI has increased awareness of children issues and improved the public policy process shaping the lives of NC's children and youth.

The *NC Children's Index 2002* is one of several publications and reports developed by NCCAI. Recent and current publications can be viewed at, and downloaded free of charge from www.ncchild.org. NCCAI also distributes KIDS COUNT publications: e.g., *Children at Risk*, the *Right Start Trends* and the annual *KIDS COUNT National Data Books*.

In addition to published reports, NCCAI also provides valuable information electronically via its website (www.ncchild.org) and its on-line news service: NCCAI InfoNet. The website includes printable versions of all publications and a searchable database of indicators of children's well-being at the state and county levels. The website offers data on more than 250 indicators — many from several time periods — and allows users to track trends.

Acknowledgements

Members of the staff of the North Carolina Child Advocacy Institute developed the *NC Children's Index 2002* as a collaborative effort. **Joann Haggerty** had the lead responsibility. Other staff members involved include: Jonathan Sher, Annette Plummer, Jennifer Tisdale, Kim Howes, Hildy Fong, Brandy Bynum, Tom Vitaglione, Randi Munns, Jane Pinsky, and Lyn Jackson.

- Population Reference Bureau: especially Kerri Rivers and Kelvin Pollard, and
- Child Trends: Brett Brown.

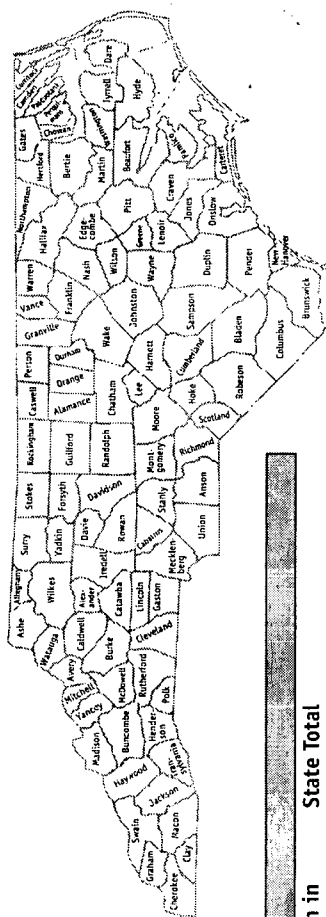

Financial Support

The North Carolina Child Advocacy Institute gratefully acknowledges

- The generous financial support of the Annie E. Casey Foundation, through its KIDS COUNT program,
- The North Carolina General Assembly for its grant in aid to support information and data collection,
- The Z. Smith Reynolds Foundation for general support of the Institute's public policy research and analysis, and
- Many corporate and individual donors.

Finally, we appreciate the graphic design and production services provided by Carol Majors and Ann Farmer at Publications Unlimited.

Why North Carolina needs to support the Leandro Decision

Percent of children NOT testing at or above Level III in Reading and Math Proficiency

Percent of students NOT completing high school in 4 years

The Leandro Decision: North Carolina Supreme Court decision establishing the constitutional right of all NC children and youth to a "sound basic education."

Why North Carolina needs to support the Leandro Decision

Percent of children NOT testing at or above Level III in Reading and Math Proficiency

Percent of students NOT completing high school in 4 years

The Leandro Decision: North Carolina Supreme Court decision establishing the constitutional right of all NC children and youth to a "sound basic education."

See Discussion of the Issues and Data Notes and Sources for more detail.

Unless otherwise noted, "child" or "children" refers to people ages 0-17. ²All indicator rates are per 1,000 children, unless followed by a % sign or otherwise noted.

n/a means data was not available.

Special Note: When numbers are under 20, rates may be less meaningful and should be used with caution.

■ = county % change
■ = state % change

BEST COPY AVAILABLE

Data Notes and Sources

Three Ways to Access Data on Child Well-Being

1. **Trend Data**—This web based version of the *NC Children's Index, 2002* reports 31 indicators tracked over time for all one hundred North Carolina counties. Two full pages of trends in child well-being for two time periods are available at www.ncchild.org. Pages can be printed.
2. **Recent Year County Comparisons**—A hard copy version of the recent year rates in the *NC Children's Index 2002* is available by contacting NC Child Advocacy Institute by email at nccai@ncchild.org, or calling 919-834-6623, x 229. The printed version, "Welcome to the NC Children's Index 2002," allows users to track their county's rates on 31 key indicators of child well being for the current year's data. These tables of rates for the recent year allow users to compare counties. These tables are also available in pdf versions of this publication at our website www.ncchild.org.
3. **Interactive Data Base**—NCCAI also offers these data and more in a searchable database at our website www.ncchild.org. The database includes over 250 indicators of child well-being, and allows comparisons and mapping. For an explanation of how to use our interactive data base, see pages 9-10 of the Recent Year County Comparisons publication.

Indicators of Child Well-Being Which Are Different from Those Reported in the Last Edition *NC Children's Index 2000*

Changes to indicators previously offered in *NC Children's Index 2000*

- Age distributions reported are different from *NC Children's Index 2000* as this is what is offered by the US Census.
- More complete listings of racial groups are offered as this is now available from the US Census.
- This *Index 2002* reports the "Births to mothers who had inadequate prenatal care" whereas the last edition *Index 2000* reported the opposite, "Births to mothers who began prenatal care in 1st trimester" (which is considered adequate prenatal care).
- This *Index 2002* reports "Youth in the juvenile justice system" which includes youth admitted to Training Schools, Detention Centers and to programs under Juvenile Crime Prevention Councils (JCPCs). The *Index 2000* reported only "Admissions to training schools and detention centers."
- In this *Index 2002*, "Public School Annual drop out rate" refers to students in grades 9-12 who drop out. In the *Index 2000* we reported students from grades 7-12 who dropped out. Including middle school age students who are less likely to drop out artificially increases the total population affected and reduces the rates reported. This *Index 2002* reports only on high school students and provides a more accurate picture of annual drop outs.

- In this *Index 2002*, on the page with Trends in Child Well-Being, the "Percent Change in Rate" is illustrated as only the *increase and decrease* in the rate. This does not signify whether an increase is better or worse for NC's children. Some indicators are better for kids if the rates go down, such as Infant Mortality. Some indicators are better if rates go up—such as test scores. In the previous *NC Children's Index 2000* the "Percent Change in Rate" graphic illustrated whether the indicator was *better or worse* for kids.

New indicators offered in this edition of *NC Children's Index 2002*

- "Children enrolled in Medicaid."
- "Four year public high school completion rate" which is a more revealing picture than the drop out rate, but the two can be used together.
- The "Family Types" table provides a picture of the homes our children are living in.
- "General Economic Indicators" help illustrate the economic stresses on families. This is an important complement to the Economic Trend data on children also provided for each county.

Special notes on interpreting time periods and rates

Time Periods—Years sometimes the represent calendar year (Jan–Dec), but are often for school year or state fiscal year (SFY) July to June.

- **Base year and recent years** were 1990 and 2001 whenever possible. For several indicators, the method of data collection has changed since 1990. More recent years are used so that the definitions of the reported data are the same for base and recent years.
- **Five-year average rates** are used for infant mortality and child deaths to even out the effect of a small number of deaths, and to broaden the ability to make comparisons.
- **Some data are offered as one point in time**, rather than a cumulative total for the whole year, to balance out the effect of fluctuations over the year, such as Foster Care data.

Rates are used for the various indicators. When not otherwise indicated, rates are percentages. Rates are a ratio of the number of events, divided by the number of persons. Denominators for rates and percentages are the total population of children who could have experienced the event within a specified time period unless otherwise indicated. For example, births to teens, ages 15–19, is divided by the total number of female teens, aged 15–19, in a given year.

Rates are used for indicators, rather than only using the raw numbers, in order to compare among populations at different times and different places. Rates adjust for the difference in size or growth of population. Other notes for the rate calculations include:

- For all rates, population figures used for the denominators were based on the same year as the indicator data was collected, except as noted.

- Low incidence events can be compared more accurately when using a larger denominator, therefore mortality rates are often multiplied by 1,000 or 100,000.
- **Rates per 1,000** are used for infant mortality, child abuse and neglect figures, foster care, admissions to training schools and detention centers, and births to teen mothers.
- **Rates per 100,000** are used for deaths of children, ages 1–17.
- Percentages are rate ratios and are used for most indicators except as noted above.

Percent change in rate is calculated by using the difference between the recent and base year rates divided by the base year percent or rate: Recent rate-base rate/base rate. This is graphically illustrated on the right hand side of the county Trends page. The change in the rate indicates whether the numbers have gone up or down during the trend period. This does not signify whether an increase is better or worse for NC's children. Some indicators are better for kids if the rates go down, such as Infant Mortality. Some indicators are better if rates go up—such as test scores. Please note: this is different from what our graph illustrated in our last edition of the *NC Children's Index 2000*, when the "Percent Change in Rate" graphic illustrated whether the indicator was better or worse for kids.

Caution: Rates were not calculated when there were fewer than six incidents occurring in a county. Rates based on small numbers of events and small populations can often vary dramatically. In assessing the relative incidence or mortality conditions of a county, caution should be used when the number of actual events is less than 20. In these cases, random error may be substantial.

tial, making such rates less stable. Comparisons using these rates are risky. Such rates are not considered statistically reliable for projecting trends or considering impact.

School data are aggregated by county. Several counties have more than one school system within them. The county data presented combine the numbers from all school systems in the county (just as system data combine the numbers from all its schools). Charter schools are included in the recent year. Private schools are not included. School district averages are weighted to account for the different sizes of the districts' populations.

Background Demographic and Economic Indicators

In order of appearance on the state/county profiles

Population Estimates

Total population represents all residents of that county or state, including the homeless, and those in group quarters and institutions, such as prisons. Population figures are drawn from the 100% count (complete enumeration 1990 and 2000 census) conducted on April 1st, 1990 or 2000. The child population includes children, ages 0-17. The child population is a percent of the total population and is calculated by dividing the child population by the total.

Source: *Census 1990 and 2000, US. Census Bureau.*
Available at <http://www.aecf.org> and at www.census.gov
Years: 1990 and 2000

Racial/Ethnic Diversity of Children

The racial/ethnic diversity of children is the percent of population ages 0-17 that were listed in a particular racial group. While census respondents can declare their own race, the adults in children's lives were responsible for assigning the racial group to children and youth.

It is important to note that the racial groups allowed in the 2000 census were different from the 1990 census, because respondents could mark more than one race, and because some racial groupings were changed. Therefore, the two time periods cannot be compared. The five major race categories include only those individuals who selected a single race. Categories of "Asian and Pacific Islander" and "More than one race" did not exist in 1990. Respondents who selected more than one race are only counted in that category and

not in the other separate racial groups. Thus, for example, the "African American/Black" group does not include those who listed "African American/Black" in addition to any other race. These individuals were counted in the "More than one race" category.

Important notes on Hispanic Ethnic group: *Hispanic/Latino* can be of any race as determined by the US Census Bureau.*

Hispanic/Latino population estimates are indicated separately from the racial categories. "Hispanic" is considered an ethnic category, and can include persons of any race. Therefore, Hispanics are also included in the appropriate racial group in the Racial Diversity chart.

According to the 2000 census, North Carolina has experienced one of the largest percentage growth rates for Hispanics of any state. Despite the increase reflected in the official 2000 census figures, some advocates estimate even higher numbers of Hispanics than the census figures show. The Faith Action Group, of Greensboro, NC provides alternative estimates of this population by adjusting census data and including other factors. For 2002, they estimate a total of 487,718 Hispanics of all ages in NC compared to the 2000 census estimate of 378,963. Their data and methodology is available at <http://www.nr.infi.net/~faithact>.

*The terms Hispanic and Latino are used interchangeably.

Family Types

Children are listed as either living in households, or living in group quarters (homes or institutions). House-

holds are defined by the US Census as including all the people who live in a housing unit, whether they are related or not. Most households consist of parents living with their own children. It is notable that almost one out of every four children in the state is living with a single parent. In addition, there has been an increase in the number (though not the percent) of children not living with their own parents, such as with grandparents or foster parents.

The US Census Bureau recognizes 21 types of group quarters: those in institutions (hospitals, correctional and other juvenile facilities where there is supervised care and custody) and those not in institutions (dormitories, group homes).

NC Health Choice

The unduplicated number of children enrolled in the NC Health Choice at three different time periods. NC Health Choice, NC's Children's Health Insurance Program, provides health insurance to children, ages 0-17, living in lower income working families, who do not have health insurance, yet make too much money to qualify for Medicaid coverage. NC's Health Choice is funded by state and federal money and began enrollment on October 1, 1998.

Due to North Carolina's state budget shortfalls, Health Choice enrollment was frozen as of January 1, 2001. Because of the requirement to re-enroll annually, families were unable to re-enroll, and the Health Choice rolls dropped significantly. In October 2001, the legislature voted to open enrollment. Current enrollment

is higher than before the freeze. This increased enrollment indicates the need for this important program. Recent economic pressures have increased joblessness and decreased benefits for workers. Health Choice has helped children in these families to continue to access medical care. During the spring and fall of 2002, due to continued state financial crises, the Health Choice program is again threatened with an enrollment freeze. This program offers critical preventive care to NC's children and enrollment should not be frozen again.

State Fiscal Year: Jan. 2001, Oct. 2001 and July 2002*

General State/County Economic Indicators

This section on state/county general economic indicators has been added to the *Children's Index* this year to complement the economic factors that relate directly to children as seen in the state/county Trend Indicators chart. By providing several key economic indicators over time, we have underlined the recent increased financial burdens on families and wage earners.

In the last two years, a general economic downside has occurred in North Carolina, as well as the country, due to multiple factors including: the overall decrease in the state's manufacturing jobs, the new high technology firms' decrease in growth, the Sept 11th terrorist attacks, and fiscal/ethical discrepancies in large corporations. These factors have caused personal and family economic stress. In addition, these decreases in personal and corporate income reduces the state's income from its tax base and from capital gains. This, in turn, has affected the state and counties' ability to provide services for families and children.

Unemployment
Unemployment figures are generated by the US Bureau of Labor Statistics. The Local Area Unemployment Statistics (LAUS) program generates monthly estimates of total labor force, employment, unemployment and unemployment rates for the state and counties. The definition of the civilian labor force is the total employed plus the unemployed. Some persons are not considered in the labor force, including school students, disabled persons, those retired, and those not looking for work. The unemployment rate is calculated by dividing the unemployed (and those looking for work) by the civilian labor force. The labor force data are based on the same concepts and definitions as those used for the official national estimates obtained from the Current Population Survey (CPS) and uses regression models and historical data to develop employment and unemployment estimates. Measurements of unemployment are separate from the counts of people filing for, or receiving, unemployment.

Per Capita Income

The per capita personal income includes personal income for every person in a geographic area. Personal income is more than wage and salary income, but also includes fringe benefits, interest income, profits from business dividends, cash transfers, including Social Security payments, and welfare payments, and indirect business taxes. It is computed by dividing the total income of an area by its total population. The income year is one calendar year. Per capita personal income

is a measure of the economic well-being of individuals and their ability to provide for all residents.

Year: 1996, 1998, 2000*

Median Family Income

Family income consists of total money income received in the calendar year by all family members 15 years old and over, tabulated for all families. Family income differs from household income by excluding income received by household members not related to the householder, persons living alone, and others in non-family households. Median family income figures are derived from the entire distribution of family incomes. This is based on Long Form Census 2000 data. The median family income is a measure of the economic well-being of individuals and their ability to provide for their families.

The NC Self Sufficiency Standard (SSS)—Income needed for family (1 parent & 2 preschoolers)

The Federal poverty guidelines can be considered obsolete as they calculate the cost of food, and then consider this to be 33% of the total family budget. Experts estimate families currently spend closer to 13.5% of total family budget on food. In recognition of the limitations of the official definitions of poverty, the Wider Opportunities for Women developed a Self-Sufficiency Standard in 1996 (and updated the figures for 1999). These figures represented more completely

The NC Children's Index 2002

what expenses families really have and what they need to manage. This was calculated for a variety of family sizes. What is presented here is the income needed for a family consisting of a single parent, one infant, and one preschooler. Figures for other family sizes and further explanation of the development of the Living Income Standard are available from the NC Justice and Community Development Center Standard—see below.

Source: *NC Justice and Community Development Center and NC Equity*. See also their publication: Schmidt SK, Gerlach D. Working Hard is not Enough. Raleigh NC: NC Justice and Community Development Center and NC Equity, Jan. 2000. Year: 1996 and updated in 1999.

Families Earning Less than the SSS—NC Self Sufficiency Standard

The percent of families in the state/county who earn less than the amount needed to achieve a modest family budget, called the Self Sufficiency Standard "Living Income Standard" or "LIS." Developed by the NC Justice and Community Development Center and NC Equity, this standard using the methodology of the 1996 Wider Opportunities for Women Self-Sufficiency Standard of 1996 and updated the figures for 1999. 1999 income tax records were used. Family expenses were estimated, including housing, food, child care, transportation, medical, tax costs, Earned Income Tax Credit, child care, and a 10% miscellaneous figure for such things as clothing, household items, etc. Because the standard was based on tax returns, it includes single individuals, but excludes people not paying taxes.

The Living Income Standard reflects between 150% to 175% of the federal poverty level for rural areas and about 200% of federal poverty level for urban areas. The real needs of working families are more accurately reflected in the LIS than in the Federal Poverty guide-

lines. The Federal guidelines can be considered obsolete as they calculate the cost of food, and then consider this to be 33% of the total family budget. However, the current 1998 Consumer Expenditure Survey estimates average families spend only 13.5% of their budget on food, which is the percentage the LIS uses. The LIS also accounts for increased amounts families now pay for transportation and child care.

Why North Carolina needs to implement the Leandro decision

The North Carolina Supreme Court ruled in 1997 that ALL children in North Carolina have a constitutional right to an equal opportunity to receive a "sound basic education." The original case was filed in 1994 and was known as the Leandro case for one of the original plaintiffs. This lawsuit originally focused on the lack of equity in school funding, and was brought against the State of North Carolina by parents, school boards, and students in five "low wealth" counties—Hoke, Halifax, Robeson, Vance, and Cumberland. The group charged that the state was failing to provide adequate and equal educational opportunities to the children in those counties because of the differences in opportunities available to children in wealthier counties.

In a series of rulings, the NC Superior Court established measurable standards by which educational outcomes matter more than the end of the year "high stakes" standardized tests. Judge Howard Manning has found that:

- (1) All children in NC are not receiving a sound basic education.
- (2) The State of NC has the ultimate responsibility to ensure that every child has an equal opportunity to obtain a sound basic education.
- (3) If necessary, the State must provide additional resources to help children at-risk of academic failure.

The Leandro ruling has the potential to extend further than its original context. The decision emphasizes that the reason children are "at risk" is more than an education issue, as children bring their whole lives to school. Reducing the student to teacher ratio and placing certified teachers and energetic, qualified principals, in classrooms is a good first step. However, it cannot overcome all of the impediments children bring to school with them that place them at-risk of academic failure. As long as NC ranks near the bottom in the US in child well being, we CANNOT be first in education.

As a means of tracking how North Carolina is doing in these areas, this *North Carolina Children's Index 2002* features, for both the state and county levels, a graphic illustration of two indicators of child well-being. In the 2000-01 school year, almost one third of our state's third graders did not perform at grade level in End of Grade reading and math tests. Even more distressing is that, many of our high schoolers are not completing high school. During 2000-01, an overwhelming 42% do not finish high school in four years. These rates vary from county to county, but on average, these two facts from our data demonstrate that our North Carolina schools have a very long way to go to provide a sound basic education to all of our young people.

Trends in Child Well-Being Economic Indicators

North Carolina needs to implement this significant Leandro decision now. We need to ensure that all children get their needs met and that they can receive and use the "sound basic education." We urge North Carolinians to work together to support services for ALL children and youth, improving the public schools efforts. We must put "first things first" if we are going to be able to take advantage of the enormous possibilities offered to every child in NC by the groundbreaking Leandro decision.

Source for data: North Carolina Department of Public Instruction
Available at <http://www.ncpublicschools.org>
Years: 2000-01

Percent of children living in poverty

The percentage of children ages 0-17 who reside in households having an annual gross income falling below the federally-established "poverty line" for their family size. The federal poverty threshold was defined by the US Office of Management and Budget in the 1960's. This poverty definition varies according to the size and composition of the family. For 2000, the poverty threshold for a family of two adults and two children was \$17,463. (For another view on the economic burdens on NC's families, please see the more updated definitions of a Living Income Standard in the section Families Earning less than the NC Self Sufficiency Standard.)

Please note that these poverty data are from a different source than the one we used in the previous *NC Children's Index 2000*. While both are generated by the US Census Bureau, the previous data presented were SAIGE estimates (Small Area Estimates—Branch Housing and Household Economic Statistics Division) from surveys done between the decennial censuses and should not be directly compared to data from the other source.

It is important to note that NC had an *increase* in the number of children who are in poverty between 1990 and 2000. The percentage of children in poverty in the state overall did *decrease*, although not in all counties. Reduction in child poverty is a cause for celebration. However, 2000 represents the best time period for our state's economy. Soon after that, our economy suffered major blows. Data on child poverty is not yet available for the time period 2001 and 2002. The rate of child poverty will be affected by our state's economic challenges.

Year: 1990, 2000

Children receiving TANF/Work First recipients

The monthly average number of children, ages 0-17, who are the intended beneficiaries of welfare payments made through TANF (Temporary Assistance for Needy Families) to their parent(s) or other adults responsible for them. Poor children in NC are not automatically enrolled for or benefiting from TANF payments.

In 1996, the federal Personal Responsibility and Work Reconciliation Act reformed the welfare program known as Aid to Families with Dependent Children (AFDC), consolidating it into the TANF program. In NC, the program is titled Work First.

TANF/Work First funds are used for more than cash payments, such as child care subsidies, transportation, and employment training intended to assist welfare recipients in making the transition from welfare to work. However, the numbers reflected in this *Index 2002* indicator are only the children in families receiving direct payments. Another use of TANF/Work First is reflected in the child care subsidy indicator listed below.

Source: Division of Social Services, NC Department of Health and Human Services or UNC Jordan Institute
Further data information available at <http://ssw.unc.edu/workfirst>
Year: 1998, 2001

Children who receive Food Stamps

The total number of children who are the intended beneficiaries of the federal Food Stamp program (through which low-income adults and their children receive monthly coupons redeemable only for a certain dollar amount of federally-approved foods and other grocery items). There is not an exact correlation between the

The NC Children's Index 2002

number of children living in poverty and the number of children benefiting from Food Stamps. The main reasons for this discrepancy are: 1) the fact that some "near-poor" families (i.e. just above the federally established poverty line) are eligible for Food Stamps; and, 2) the reality that not all the families officially eligible to receive food stamps actually do so. Although possible, it is very unusual for the number of children benefiting from Food Stamps to equal or exceed even the number of children living in poverty.

Source: Food Stamp Information System, Department of Health and Human Services

Further information on Food Stamps available at
http://www.dhhs.state.nc.us/dss/ei/ei_stamps.htm
Year: 1998, 2001

Children enrolled in free or reduced price school lunch

The number of children in public schools who are enrolled in free or reduced cost breakfasts and/or lunch programs at school through the government subsidized National School Lunch Program and National School Breakfast Program. Only about half of the approximately 99 charter schools are enrolled in the program. Eligible children include those residing in households having a gross annual income below or a little above the federally-established poverty line—with a uniform sliding scale fee based upon income and family size. This is a voluntary program and, consequently, the number of children actually participating is almost always significantly lower than the number of children eligible to participate. Students from all public school systems in the same county who receive subsidized meals have been combined in these data, but the numbers are weighted when calculating the percentages.

Although preschools have been connected to public schools in the last two years, the numbers reported here reflect only children in the grades K-12.

The rate is the percentage of the Average Daily Membership (ADM) of students in the school district that are enrolled in the school meals programs. Note the Average Daily Membership of students listed is not the final ADM used for the per pupil expenditures' figures.

Source: NC Department of Public Instruction
School Years: 1993-94, 2000-01

Children in publicly subsidized child care

The average monthly number of eligible children, ages 0-17, who receive federal/state subsidized child care through TANF/Work First, Smart Start, and other initiatives. Child care is subsidized for families with incomes in the ranges of those eligible for welfare, the working poor, or those are working but make modest incomes. Although the larger number of children is in the 0-5 age range, these numbers reflect children ages 0-13 in order to include those in after school care. Although there may be some children over 13 with special needs who receive subsidies, this number is not significant.

There are other sources of subsidized child care across NC (e.g., religious or civic organizations, local governments and businesses). However, non-governmental data are not included here. For counties receiving these subsidy funds through intermediary, multi-county organizations, the count of children served may not be as precise because the state agency collects data by grantee, not by county. This number does not include all the Smart Start scholarships given.

Under the 1996 federal welfare reform (see notes above),

counties may use TANF/Work First monies for child care subsidies. Child care subsidies are granted on a sliding fee scale: the lower the income, the more the family receives for child care. The fee the parent pays is 8-10% of their income. The range depends on family size.

The percent of children receiving subsidies in a county may reach over 100% because: 1) Some children may receive more than one source of subsidy; 2) Some children who are receiving subsidies are enrolled in unregulated child care settings.

Caution: The numbers for 1994 include some children who may be counted more than once if they received more than one source of funding. The numbers for 2001 do not have duplicates.

Source: Division of Child Development, NC Department of Health and Human Services
Year: SFY 1994, 2001

Children enrolled in Medicaid, ages 0-18

The unduplicated number of children, age 0 through 18, enrolled for Medicaid benefits at any time during the year. This includes children who are in families and those who are receiving services as individuals. This number may be higher or lower than the enrollment on any given day. This annual number is higher than the monthly averages. This includes people who were enrolled but left the program. The count is unduplicated within each county, but is duplicated across counties over time (as people may move from one county to another). However, the state total is unduplicated.

The Medicaid program provides significant support for prevention and health care for one in every three North Carolina children. Note, however, that although chil-

Health Indicators

dren represents about 67.9% of all Medicaid recipients, families, and children only spent 26.6% of the total Medicaid expenditures in 2001 when compared to the elderly and disabled groups. (Source: 2001 Annual Report on Medicaid from the Division of Medical Assistance, NC Dept of Health and Human Services, Exhibit 3, p. 8. —These may not be the same as the yearly unduplicated numbers offered here.

Year: Calendar year 1997, 2001

Important note: All birth statistics are based on place of residence of the mother. Births occurring to nonresidents of the US or to citizens outside of the US are excluded.

Infant mortality rate

Infant mortality reports on deaths of children born alive, but who did not survive to their first birthday. These numbers and rates (per 1,000 live births) are reported for five-year periods in order to even out the effect of a small number of deaths in a small county.

The inverse of this indicator and the data also highlights the good news that approximately 990 of every 1,000 NC infants currently do live to celebrate their first birthdays. This is a composite indicator that masks very diverse realities between races. Despite improvements for all races in infant mortality rates in the last decades, the non-white rate is more than twice the rate for whites. In addition, no distinction is made among inevitable, accidental or intentional infant deaths, nor among those that were at least potentially preventable and those that were not. Despite these qualifiers, the infant mortality rate is an accurate indicator representing a complex set of causes and needed responses.

The bad news is that North Carolina is ranked 46th of the 50 states in our Infant mortality rates according to the 2002 KIDS COUNT Data Book. (produced annually by the Annie E. Casey Foundation—see at www.aecf.org). Clearly our state has much work to do to improve on this indicator.

See Special Notes on rates—above

Some of these data are available at <http://www.schs.state.nc.us/healthstats/deaths> but they may be annual numbers or not have the same definitions. Year: 1990–94, 1996–2000

Babies born with low birth weight

The percentage of all babies born who had a low-birth weight. Babies weighing under 2500 grams (5 pounds, 8 ounces) at birth, regardless of length of gestation, as reported on the birth certificate, are considered low birth weight. Many premature and other low birth weight babies who, in previous generations would have died, are now being saved—primarily because of NC's distribution and quality of neonatal intensive care units and staff. Some low birth weight babies face serious health and developmental challenges.

Source: State Center for Health Statistics, NC Department of Health and Human Services

Some of these data are available at <http://www.schs.state.nc.us/healthstats> but they may not have the same definitions.

Year: 1990 and 2000

Births to mothers who were aged 15–19

The number of young women (age 15–19) per 1,000 females in the same age group, in the same county/state, whose pregnancies resulted in a live birth during the year. These data do not reveal the marital status of these young women, nor whether the birth mother is actually raising (or has legal custody of) the baby. While a small number of young women below the age of 15 do have babies, including lower age groups in the denominator would understate the teen birth phenomena. Of particular concern is that the birth rate for non-white teens is almost twice that for whites.

The NC Children's Index 2002

Source: State Center for Health Statistics, NC Department of Health and Human Services

Some of these data are available at

<http://www.schs.state.nc.us/healthstats>

but they may not have the same definitions.

Years: 1990, 2000

Births to Mothers who had Inadequate Prenatal Care

The number of births that occurred to mothers who reported receiving inadequate prenatal care—defined as only receiving care in the third trimester of their pregnancy, or receiving no prenatal care. Mothers who receive timely prenatal care are less likely to have babies with health problems. Inadequate prenatal care may be due to a mother's lack of attention to its importance, or due to a lack of available health care. Please note that most experts agree that prenatal care should begin at least by the second trimester of pregnancy. This time period was chosen to be consistent with the national statistics as reported in the KIDS COUNT annual data books.

At the time of birth, mothers are asked by health care personnel when they began prenatal care. These data rely on mothers to accurately and truthfully indicate when they began their prenatal care. The importance of early and complete prenatal care is essential. Mothers who receive prenatal care have healthier babies and are healthier themselves than those who do not receive care. Babies born healthy are much more likely to thrive.

Caution: In the NC Children's Index 2000, we reported the percent of births to mothers who began prenatal care in their first trimester, i.e. those with adequate prenatal care.

but they may be annual numbers or not have the same definitions.

Years: 1990-94, 1996-2000

Education Indicators

Child care enrollment

The number of children enrolled in any type of child care facility that is regulated by the Division of Child Development, NC Department of Health and Human Services. This includes regulated family child care homes, licensed child care centers, and religious based programs. Children in child care can be any age, 0-17. Children may be full or part day, or in after school care. To calculate the percentage of children in child care, the population of children, age 0-13, was used as the denominator. Although there may be some children over 13 with special needs in child care, this number is not significant. Some children are in programs which are on Temporary or Provisional status which would not be included in these statistics.

All regulated child care facilities in North Carolina are rated by the Division of Child Development. Facilities can earn up to five stars depending on the quality of their program. This system allows better classifications of child care facilities and gives parents more information to use when choosing a child care program for their child.

It is important to note that many children are in unregulated child care, which includes settings where less than four children are in care, or if the children are in care for less than four hours a day. These numbers are not included in this Index data.

Caution: Some of these data may be up to three years old. Unless there are special problems, programs only receive a visit from the regulator once every three years.

Source: Division of Child Development, NC Department of Health and Human Services

Some monthly data is available at <http://ncchildcare.net>, although not in this format.

Years: 1994, 2001

Public School End of Grade Testing: Third graders and Eighth graders proficient in reading and math

The number of third and eighth graders who were considered proficient in reading and math in the End-of-Grade testing. Proficiency is students scoring at or above 2.5 out of 4 as determined by standardized measures. (The percent proficient is of the total number of fourth graders who took the proficiency test.)

In 1989, for the first time, the NC General Assembly enacted the School Improvement and Accountability Act and subsequently in 1996, the School-Based Accountability and Management Program, commonly called the ABCs. State developed end-of-grade tests for grades 3-8 are used to measure student growth and performance in the curriculum areas of reading, math, and writing. Although controversial and definitely stressful for teachers and students, testing can be used to identify areas of student and school needs. Testing results should only be used as a complement to other measures used in evaluating students, teachers, and schools, rather than being used as a single high stakes measure for the decision whether to pass an individual student.

Source: Reports of Supplemental Disaggregated State, School System (LEA) and School Performance Data for 2000-2001, Subgroup Statistics by State, School System and School, provided by the Division of Accountability Services, North Carolina Department of Public Instruction

Years: 1997-98, 2000-01

Percent of graduating seniors taking SAT test and average SAT score

The average score for graduating seniors in the state/

county choosing to take the SAT (Scholastic Aptitude Test). In 1995, the College Board re-centered the score scale of the SAT. However, this recalibration has slight effect on historical score trends. State scores have been re-centered for 1990, but the school district scores and county scores were not. In general, scores are higher. The trend is improving, but the county scores will look more improved because they have not been re-centered.

Scores for all public school systems in the same county have been combined using weighted averages.

Scores were reported for students who were projected to graduate. The percent of students taking the test reflects the students who were in the 8th month of membership in the 12th grade. Students could have taken the test in any year, but only the most recent scores were reported. North Carolina has done a good job in dramatically increasing the percent of students taking the SAT test.

<http://www.ncpublicschools.org/Accountability/reporting/satmain.htm>
Years: 1990, 2001

Four year public high school completion rate

The number of ninth graders who graduate four years later. This is not a true graduation rate as the public schools do not track individual students. Some students drop out of school and others transfer in and out of schools. However, this high school completion rate is better than the annual drop out rate at demonstrating the large percent of our youth who are not successful in completing our public schools. These numbers and rates were included in NCCAT's 1998 NC Data Guide

to Child Well-Being and labeled the Public School Retention Rate.

Source: NC Public Schools Statistical Profiles, North Carolina Department of Public Instruction
Available at <http://www.ncpublicschools.org/fbs/stats>
Years 1989, 2000-01

Public school annual drop-outs

The annual percentage of students in grades 9-12 who have left their public school prior to completion and are no longer officially enrolled. This annual rate does not reflect the cumulative effect on a cohort of youth, which has an average of 4 to 6% of students who drop out every year. The rates for all public school systems in the same county have been combined using weighted averages.

In this Index 2002, "Public School Annual drop out rate" refers to students in grades 9-12 who drop out. In the Index 2000 we reported students from grades 7-12 who dropped out. Including middle school age students, who are less likely to drop out, artificially increases the total population affected and reduces the rates reported. By focusing only on high school students, we are providing a more accurate picture of annual dropouts.

In 1998, for the first time, the drop out rate was calculated under new rules, which consider students to be drop outs when they leave high school for community college or GED programs. Prior to that, if a drop out went to Community College, he/she was considered a transfer to another public school. These changes, approved by the State Board of Education in August 1998, serve to more closely align NC's method of calculating drop out rates with the method used by other states.

The NC Children's Index 2002

See the four year public high school completion rate for a better view on the cumulative rate of youth finishing high school.

Caution: In 1998-99, the state Board of Education policy ended the reporting of unduplicated rates (i.e. that if a student dropped out and returned to school, then dropped out again, they would be recorded more than one time.) Rates reported here for both time periods are duplicated (i.e. a student may be counted more than one time if they dropped out more than once.)

Public school per pupil expenditure rate

The NC Department of Public Instruction computes current expenditures (excluding community services, Head Start, adult education, and inter/intra fund transfers) by using final Average Daily Membership (ADM). Other publications, especially those from national sources, use Average Daily Attendance (ADA) in computing this statistic. Since average daily membership is greater than average daily attendance, the latter method yields a higher figure for the per pupil expenditures. Public school funding includes three distinct funding sources: state, federal, and local.

Source: NC Department of Public Instruction: North Carolina Statistical Profile, 2000. *Because these figures depend on the end of year membership, this is not available until the fall of the next school year.*

Social Indicators

Child abuse and neglect—reports investigated and substantiated cases, unduplicated

The *unduplicated* number of children ages 0-17 years reported as abused, neglected or dependent per 1,000 children residing in the county. This number is what is most commonly used by the Department of Social Services. In calculating rates, population figures for 1990 were used for both 1996-97 and 2000-01 figures to be consistent with the method utilized by the Department of Social Services (DSS). There are several general points worth remembering.

- Neither the numbers for reports investigated, nor the substantiated cases, reflects the true number of reports of child neglect or abuse that may have been received at the local DSS offices. Some reports are not investigated for a variety of reasons. The number of reports is currently not available for every county. As a result, these published numbers of reports investigated and substantiated cases are considered the tip of the iceberg of cases of child maltreatment.

- This annual rate of substantiated abuse and neglect does not reflect the cumulative effect on a cohort of children and youth, which has had over 30,000 children abused or neglected annually. Many children in the population may have been abused in previous years, and may be living with the physical and emotional consequences, but may not be reflected in this years' cases.

- It can be difficult to substantiate child abuse and neglect—which helps explain the significant gap between the number of children reported and the number of children substantiated as abused or neglected. Much of the harm that occurs is unobserved (and therefore, unreported) by anyone

other than the perpetrator and the victim. Abuse and neglect most often involve a pattern and/or long unsubstantiated history of child maltreatment by adults, rather than a single or isolated incident.

- Although "neglect" is more frequently reported and substantiated than "abuse," both are harmful to children. Second, abuse and neglect most often involve a pattern of child maltreatment by adults, rather than a single or isolated incident.

- The data includes only harm done to children by family members, or adults entrusted with their care, or adults familiar to the children. Harm to children at the hands of "stranger," or in institutional settings is much rarer, is handled by law enforcement agencies, and is excluded from data about child abuse and neglect.

Caution: Please note that the previous edition of the *NC Children's Index 2000* reported the *duplicated* number of children who were investigated or substantiated as abused. This latter number counts each time a case is investigated or substantiated and includes children who may be investigated or substantiated more than once in a year. This also gives a better picture of the caseload of DSS social workers. However, in order to facilitate the discussion of the issues, we are reporting the unduplicated numbers this year.

Children in foster care

The unduplicated number of children, ages 0–17, in foster care placement as of June 30, 2001 for whom a county Department of Social Services (DSS) has legal custody and placement authority (as granted by the court system). Each child is counted one time. This includes children who are in out-of-home placements, as well as those who may be in their own home, but in DSS custody. The rate is calculated per 1,000 children in the county population. Foster care is point in time data.

Youths, ages 10–17, in Juvenile Justice system

The total number and rate per 1,000 youths, ages 10–17, admitted to Training Schools and Detention Centers and in programs under Juvenile Crime Prevention Councils (JCPCs), which includes court intake data, those under supervision of Court Counselors, as well as youth in JCPC programs such as SOS, One-on-One, Teen Court, Eckerd Camps, Boys & Girls Clubs. This number includes both first time and subsequent admissions for the same youth. This number is duplicated, and may include a youth who is counted more than once (e.g. as part of detention admissions and as part of the JCPC numbers). The rate is calculated using the population of youth ages 10–17. A small number of children under the age of 10 may be involved with the juvenile

justice system, but the number is not significant, and they are not generally admitted to youth correction facilities, but served in community programs. This number also does not reflect youth in the Special Populations Program that seeks to prevent admissions to detention. Youth, ages 16 and 17, are admitted to youth facilities if their offenses are considered misdemeanors, and if they have previously been on probation. Youth of any age can be transferred to the adult courts, if they have committed a felony and they would be sentenced to adult facilities. Youth who are involved in the juvenile justice system, but who are placed in psychiatric facilities are not included.

Caution: Please note that this indicator is not the same as the indicator listed in the *NC Children's Index 2000*, which only listed admissions to training schools and detention centers. This year's data reflect the number of youths involved in *all parts* of the juvenile justice system.
